

# Dare Agility in your projects!

■ ■ ■ The first step in your company transformation

# Audit your customer process in 5 days to determine where Agile techniques could help to increase your business performances

---

## 1. An Agile Hybrid Solution

Our approach consists in introducing Agile techniques in your customer process to **bring answers to your pain points while avoiding any negative « Big Bang » effect**

## 2. Value Stream Mapping (VSM) diagnostic

VSM is a major Lean diagnostic tool. VSM allows to take a picture of your **customer process strong and pain points and to identify initiatives to correct your pain points**

Our way of doing

## 3. A customized solution

Our solution must integrate with your environment, especially with your existing tools, project and business processes and methodologies.  
**Our solution must be designed for you**

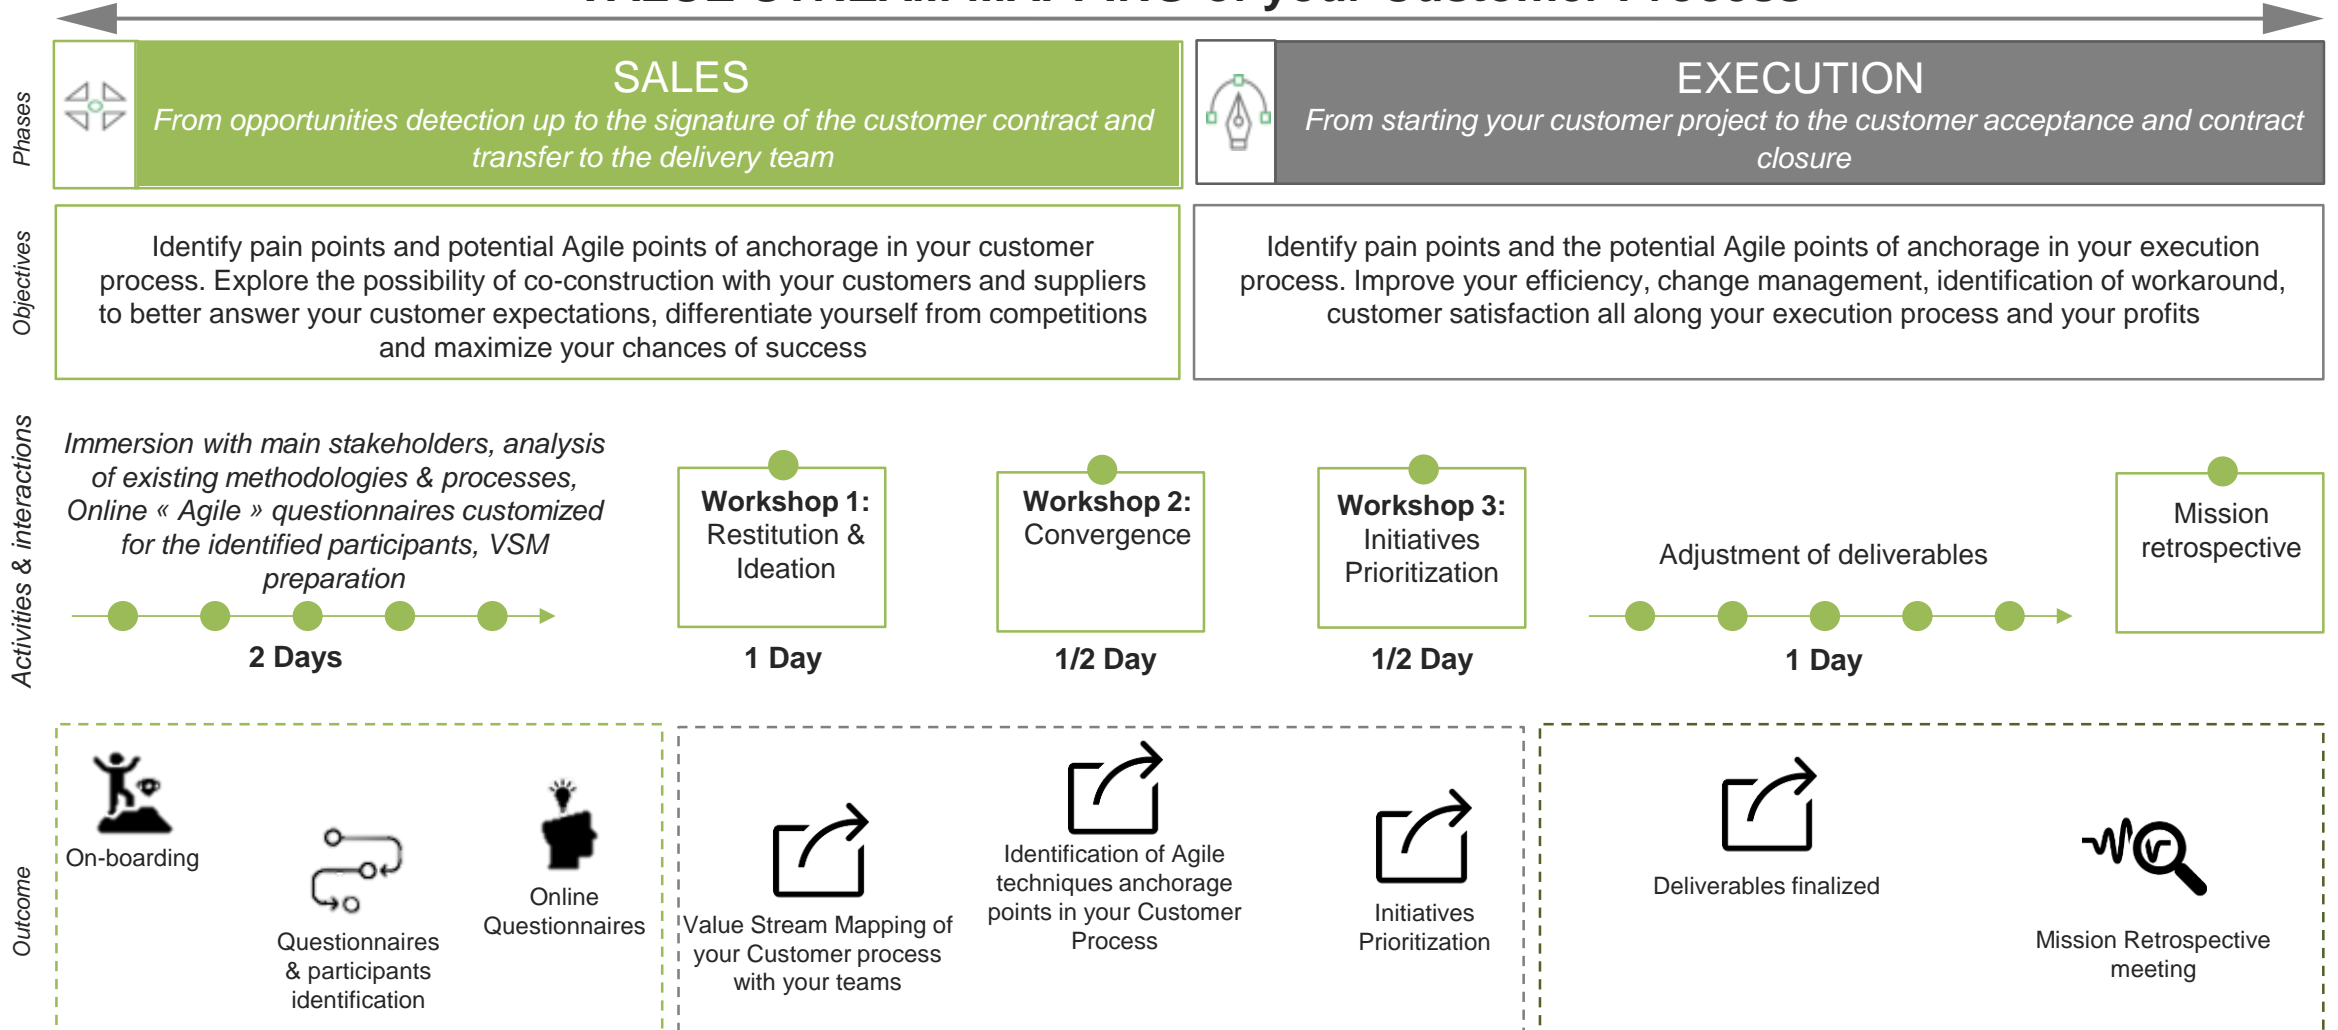

## 4. Co-construction

Our objectives are to ensure that your team will take the ownership of the solution and that this solution will fully respond to you needs.  
**Our solution must be built with you.**

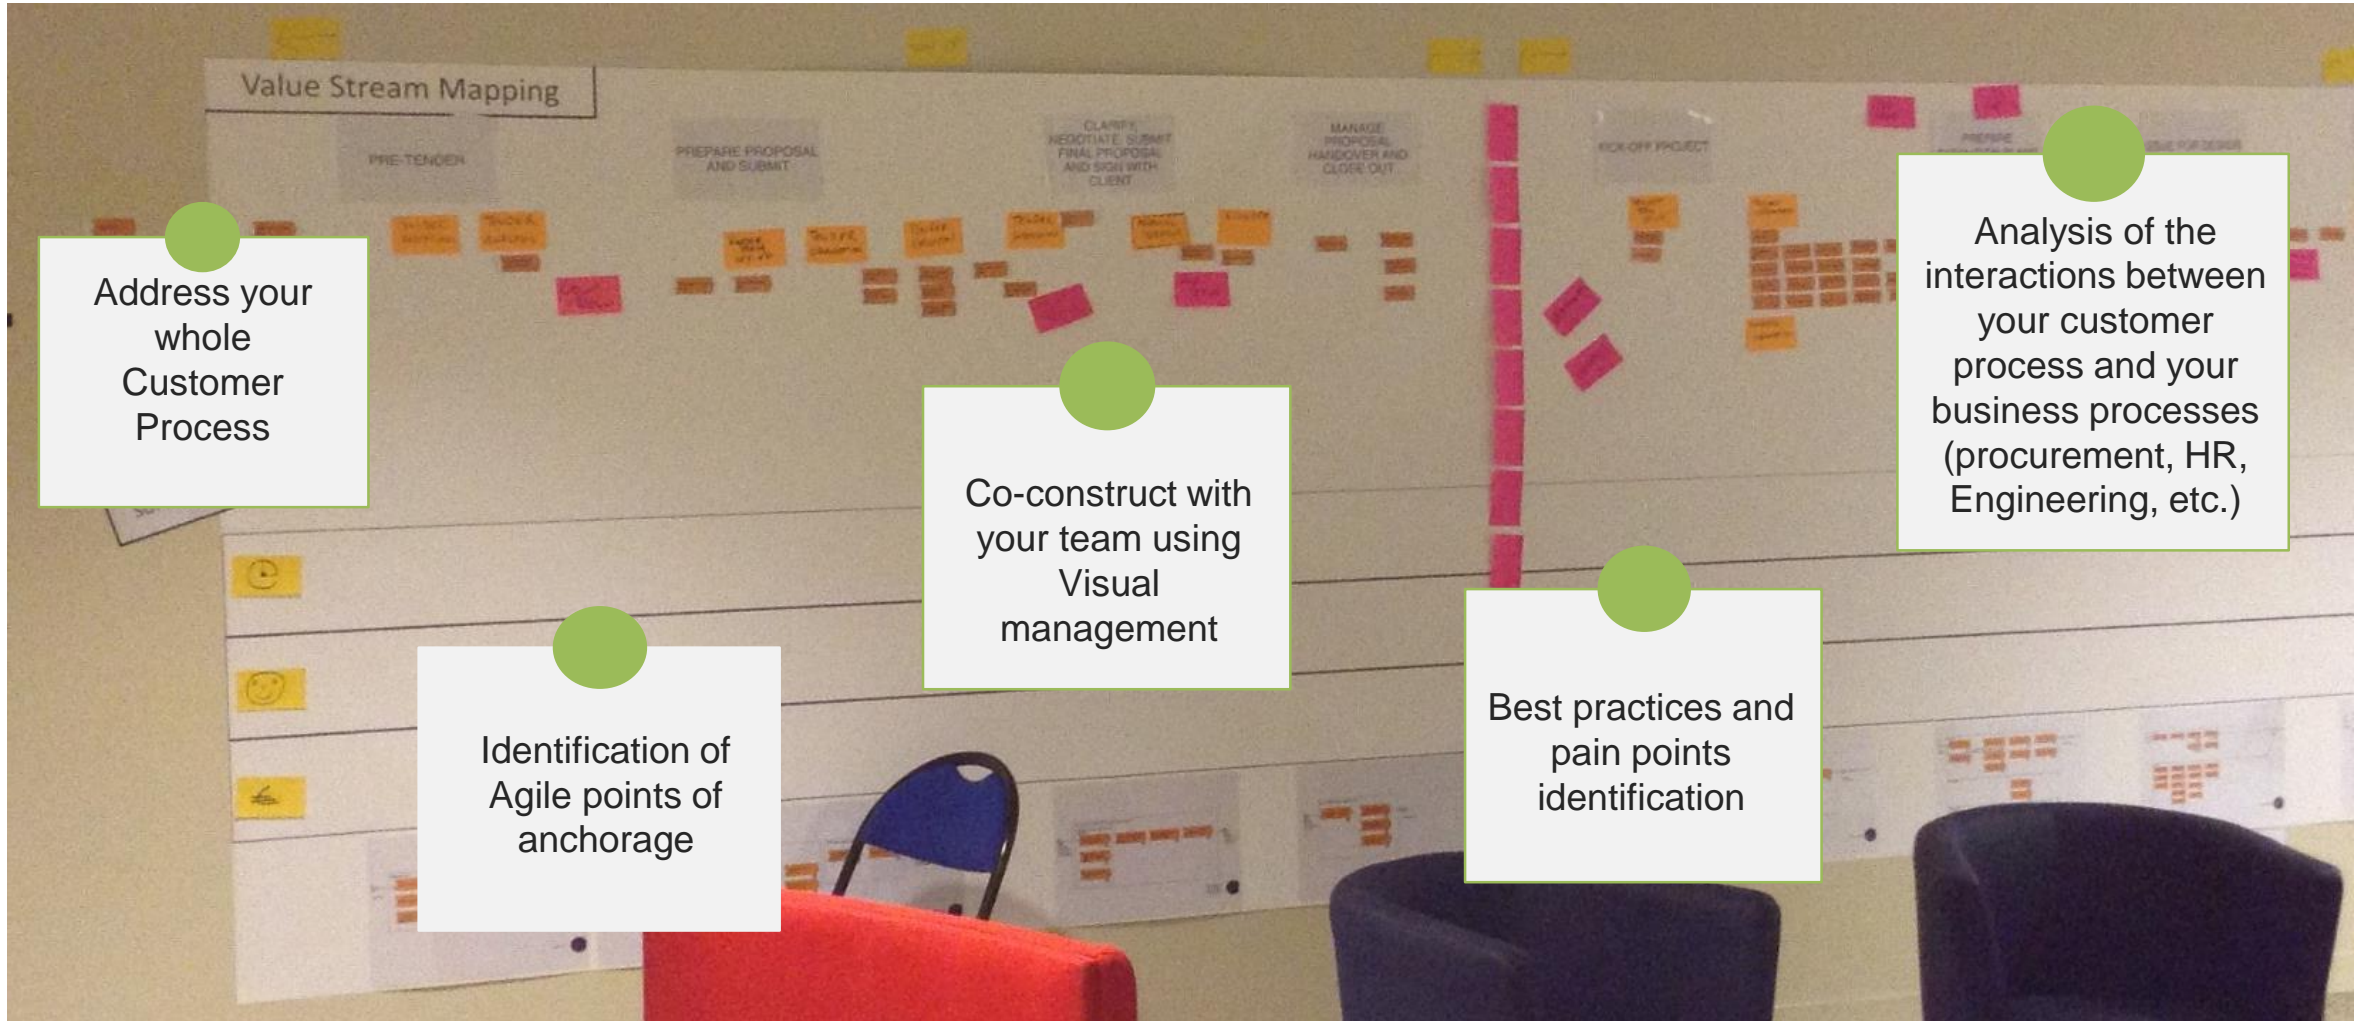

# Value Stream Mapping: A fundamental Lean management tool to improve your business performances

## VALUE STREAM MAPPING of your Customer Process

# The Value Stream Mapping in pictures

## The deliverables that you will get at the end of this 5 days journey together

---

### Our deliverables
